Dear AP student,

I'm a junior of the 2015 class. This year I took 4 AP classes, which was hell. AP Chem was probably the worst of them all. AP classes ~~are~~ seem to be for the more smarter persons with good work habits... yeah not really. I made it through all 4 AP classes, while slacking off most of ~~the~~ the year. I'm not telling you to slack off, but you don't have to work alot. You only have to be able to cram really well, to get a 3. A 5, is a whole different story. For AP Chem, the AP test, to me, was the most stressful test of my junior year. Yeah... I hated it. By the way, if I got a 1-2, then forget I wrote. If I got a 3, don't listen to me still. If I got a 4, I'm so awesome. I doubt I got a 5... :C

From,
Me (Hunter Tran)

Dear AP Student,

Unless you're taking AP Physics or AP Calc BC or something like that, then AP Chemistry will be your toughest class. I won't lie to you. You might regret taking this class. If you know that you struggle in other subjects, then I would reconsider taking the course. Just make sure you know how much you are willing to work and how you will do as a student. This class requires that you study in your extratime. If you want to do well, take it seriously.

You are going to stress out. You are going to struggle in something. But just know, you are not the only one. Do the best you can. This is where you find out how you study and what works for you. Study your ~~strengths~~ weaknesses, use your strengths. Overall, you'll live whether you pass or not.
